# **1 Introduction**

This document provides a detailed specification for the proposed software project. It outlines the goals, requirements, and constraints that are necessary for successful implementation.

## **2 Project Overview**

### **2.1 Purpose**

Many developers face challenges while reading and understanding technical documentation. This project aims to create an AI-powered mobile application which, supported by AR technology, will enhance the user experience by providing interactive and immersive documentation. Powered by IBM Watson/Grantie, the app will offer several features to assist developers in navigating and comprehending complex technical documents, including text recognition, interactive AR overlays, chatbot assistance and more.

### **2.2 Objectives within the scope**

### **2.3 Boundaries and Out-of-Scope Elements**

### **2.4 Expected Deliverables**

### **2.5 Target Outcomes**

## **3 Literature Review**

## **4 Requirements**

### **4.1 Functional Requirements**

List the key functionalities the software system must support. Provide clear and concise descriptions of features and interactions.

## **4.2 Non-Functional Requirements**

Outline performance, usability, reliability, and other quality attributes expected from the system.

## **5 System Architecture**

Provide a high-level overview of the system architecture. Include diagrams where appropriate to illustrate the system components and their interactions.

## **6 Frontend Design**

## **7 Backend Design**

### **7.1 Component Diagram**

### **7.2 Technology Stack**

List the technologies, programming languages, frameworks, and tools that will be used in the project.

## **8 Development Plan**

### **8.1 Milestones**

Detail the project timeline with key milestones and deliverables.

### **8.2 Risk Management**

Identify potential risks and outline strategies for mitigating them.

## 9 Conclusion

Summarize the key points of the specification document and outline next steps.
